----------	--	---	---

Summary	Software developer since 2017, I leverage my C# expertise and mathematical background to excel in both desktop and web development. My passion for applying these concepts fueled projects like my university's rocket simulation and the Arduino flight computer I programmed. In 2021, I transitioned to full-stack development, seeking to broaden my skillset and tackle more comprehensive projects.
---------	---

Experience	Aydos Yazılım 2024 Swift Developer Istanbul,Turkey https://antizan.com.tr/en/ I developed Antizan Software, a productivity app for Mac devices, using Swift, and employed asynchronous programming techniques to enhance its performance and responsiveness.
	crowd.inc July 2021 - March 2024 Full Stack Developer https://crowd.inc Led the development and deployment of dynamic web applications using a comprehensive tech stack (Jquery, Flask, HTML, CSS, JavaScript libraries). I engineered robust databases (SQLite & PostgreSQL) to support these applications. For a specific project (if applicable), I spearheaded the creation of a powerful Flask API. My technical skills also include implementing innovative features like the "unlimited scroll" for crowd.inc , which significantly enhanced user experience

Projects	Erasmus+ Youth Exchange June 2017 - December 2018 Arrecife, Spain
----------	---

Volunteering	Google Developer Students Club 2022 - 2023 Core Team Member <ul style="list-style-type: none">Pioneered the creation and execution of two highly successful YouTube live broadcasts Istanbul University Rocket Club 2019 - 2022 Vice President <ul style="list-style-type: none">Our team built a medium-altitude rocket with custom software for guidance and control
